Plínio Balduino

Cloud & Fintech Architect | Software Engineer | ex-Nubank, ex-
Klarna | AWS & Terraform | Regulated Payment Platforms
São Paulo, São Paulo, Brazil

Summary

Cloud and Fintech Architect with experience designing and scaling regulated financial platforms across licensed banking and high-growth environments. Contributed to the launch and scaling of Pix at Nubank and CloudWalk, delivering compliant, high-availability systems under strict BACEN timing and stability constraints. Led cost optimization initiatives resulting in multi-million savings, including a 70% infrastructure cost reduction and the transition to direct payment participation saving approximately R \$1M annually. Architected multi-account AWS environments using Terraform and modern cloud-native patterns across containerized and event-driven systems. Brings strong operational maturity with emphasis on observability, reliability, and governance in distributed systems. Experience includes ledger and core banking platforms, zero-downtime migrations, modernization of legacy systems, and leadership of engineering organizations ranging from small product teams to 300-person technical units. Focused on building resilient platforms that align technical architecture with regulatory, operational, and business objectives.

Experience

Drivemode

Cloud Architect
July 2025 - Present (1 year)

Acting as Cloud Architect and Senior Backend Engineer for the Electric Four-Wheeled Vehicles division at Drivemode in a multi-account AWS environment.

Working on Java and Spring Boot microservices running on AWS, focusing on reliability, maintainability, operational stability, and performance improvements across distributed backend systems.

Contributing to bug fixing, PostgreSQL performance optimization, deployment reliability, observability, and architectural improvements for cloud-native services.

Designing and standardizing reusable Terraform modules and CI/CD pipelines with GitHub Actions, supporting production, staging, QA, and development environments across regions.

Working with technologies including Java, Spring Boot, PostgreSQL, AWS ECS/Fargate, Lambda, API Gateway, DynamoDB, S3, Terraform, Datadog, and distributed event-driven architectures.

DiDi

Solutions Architect

December 2025 - February 2026 (3 months)

São Paulo, SP

Designed the architecture for the integration with SISBAJUD, the Brazilian judicial value blocking and transfer system, ensuring compliance with regulatory and operational requirements for financial institutions.

Led technical assessments and proof-of-concept initiatives for Boleto payment processing vendors, evaluating scalability, integration complexity, operational resilience, and business impact.

Contributed to Pix platform improvements and compliance initiatives, supporting the evolution of payment flows and regulatory adaptations within a high-availability fintech environment.

Performed hands-on backend and integration work using Python and Java 17 across AWS and dedicated private cloud environments, collaborating on distributed systems, APIs, operational reliability, and cloud-native architectures.

Caylent

Software Architect

August 2024 - April 2025 (9 months)

São Paulo, SP

Acted as a client-facing solution architect across multiple engagements, translating business requirements into technical architecture and delivery plans.

Led and contributed hands-on to a zero-downtime migration from Google Cloud to AWS within a 5–7 person team, redesigning parts of the system to leverage AWS-native services including S3 (with versioning), EventBridge, Lambda, SQS, SNS, DynamoDB, and EC2.

Implemented infrastructure as code using Terraform to provision and standardize AWS resources across separate production and staging accounts.

Supported data migration efforts and contributed to CI/CD pipeline redesign as part of the cloud transition.

Drove cost reduction and operational simplification through architectural adjustments during the migration.

Led hands-on modernization of a legacy .NET 4 and classical ASP.NET system to .NET 8 and ASP.NET MVC, performing architectural refactoring, containerizing the application with Docker, improving performance, and introducing automated testing practices.

Worked with clients ranging from startups to highly regulated enterprises, including a company serving the American prison system under strict compliance requirements.

Used Java 17, Java 21, Python, Go and C# in the projects.

CloudWalk, Inc.

Software Engineer - Tech Leader

October 2022 - July 2024 (1 year 10 months)

São Paulo, Brazil

Led a 3–5 person engineering team responsible for Pix integration and related banking services.

Designed and defined the architecture of stateless microservices connected to BACEN and the Brazilian Pix ecosystem.

Implemented ISO 20022 message handling with support for multiple concurrent message versions, enabling seamless regulatory updates with zero downtime.

Built an event-driven architecture using Kafka as the backbone, combined with synchronous REST integration from legacy infrastructure to newly designed services.

Integrated with SPI and ensured compliance with strict BACEN-defined SLAs and operational timing constraints.

Designed systems with strong emphasis on logging, auditing, observability, idempotency, and horizontal scalability to meet regulatory and availability requirements.

Led the transition from indirect Pix participation (via third-party REST APIs and webhooks) to direct participation, eliminating intermediary dependency, migrating the legacy Rails system to Go and Java services.

Delivered approximately R\$1M per year in cost savings by removing third-party API fees after becoming a direct Pix participant.

Scaled the platform to support a doubling of transaction volume within four months without stability degradation.

Worked closely with Compliance and Mobile teams to ensure full alignment with BACEN regulations and application-level requirements.

Partnered with Treasury to guarantee financial reconciliation accuracy and consistency of values across systems.

DP6

Senior Data Engineering Manager

January 2022 - September 2022 (9 months)

São Paulo, SP

Led the Data Engineering business unit within a 450-person data and martech consultancy, directly overseeing a largely horizontal organization of approximately 300 professionals, supported by two team leaders.

Maintained direct engagement with senior, mid-level, junior engineers, interns, and trainees, ensuring technical alignment and career development across levels.

Restructured and improved hiring, onboarding, and offboarding processes to support organizational scalability.

Established clearer performance review frameworks and strengthened 1:1 mentoring practices across the unit.

Increased visibility of delivery metrics and organizational performance for stakeholders and C-level leadership.

Contributed to diversity and inclusion initiatives by directly supporting the trainee program “Talentos Negros.”

Delivered internal talks, including sessions explaining the role and expectations of a data engineer within consultancy environments.

Nubank

Tech Manager

December 2019 - November 2021 (2 years)

Greater São Paulo Area

Managed and grew a newly formed engineering team (2–6 engineers) responsible for real-time credit card underwriting systems serving a customer base of over 23 million users.

Redesigned the underwriting service from a monolithic, failure-prone architecture to a modular, fail-safe design built on Clojure, Kafka, AWS, and Datomic, improving resilience and operational reliability.

Built asynchronous decisioning workflows using event streams, allowing credit decisions to complete within seconds to minutes without blocking the customer experience.

Transitioned to the NuConta domain and led an 8-person team responsible for Pix Cash Out functionality during Pix launch.

Contributed to architectural discussions in a high-volume, event-driven ecosystem under strict BACEN-defined SLA and timing constraints.

Adapted an existing transfer architecture (originally designed for TED and internal transfers with lower volume and fewer timing constraints) to meet Pix’s significantly higher scale and regulatory requirements under tight deadlines.

Led production incident management and operational response during critical rollout phases.

Contributed to Pix delivery that significantly accelerated Nubank's path to break-even, shortening a projected two-year timeline to only a few months.

Participated in delivering a Pix experience widely recognized at the time for usability and product quality.

Klarna

Senior Engineer / Engineering Manager (aAL)

January 2018 - November 2019 (1 year 11 months)

Stockholm, Sweden

Joined the Service Center domain, responsible for customer-facing support systems, contributing to backend platform and infrastructure modernization.

Migrated a self-managed Elasticsearch cluster (6–8 EC2 nodes, hundreds of gigabytes of customer and transaction data) to AWS managed Elasticsearch with zero downtime.

Transitioned from a single-region deployment to a multi-AZ architecture, improving availability and operational resilience.

Reduced infrastructure costs by approximately 70% through managed service adoption and architectural optimization.

Moved internally to the Core Banking domain following Klarna's transition into a licensed bank, contributing to ledger and core account systems within a regulated Banking-as-a-Service platform.

Built a production-grade Clojure library integrating AWS QLDB for ledger use cases and developed a Terraform adapter in Go to support infrastructure automation.

Promoted to Engineering Manager within Core Banking, leading two teams totaling 14 engineers while remaining hands-on in technical design and implementation.

Improved platform stability and introduced structured, proactive communication with internal stakeholders, reducing dependency on lengthy synchronization meetings.

Crossover for Work

Front End Software Architect

July 2017 - December 2017 (6 months)

Locaweb

Software Specialist

March 2017 - December 2017 (10 months)

São Paulo Area, Brazil

At Locaweb, I played a pivotal role in the engineering team, focusing on Object Storage and monitoring tools for corporate customers. My leadership in developing innovative solutions significantly improved system performance and reliability. By fostering collaboration across teams, we aligned our technical strategies with customer needs, resulting in enhanced satisfaction and operational efficiency.

Impacta Tecnologia

Instructor

March 2017 - December 2017 (10 months)

São Paulo Area, Brazil

Worked teaching Java for developers and non-developers.

SICPA

9 years 4 months

Senior Software Engineer / Team Leader

March 2012 - January 2017 (4 years 11 months)

São Paulo / Rio de Janeiro

Development of Track and Trace applications for beverages and cigarettes on mobile devices to Federal Revenues of Brazil, Venezuela, Canada and Morocco.

Developed a proxy server that provides webservices with Hessian, REST and proprietary protocols that allows the communication of devices.

Developed a fully functional filesystem based on FAT for a Xilinx device using embedded Java.

Organized Coding Dojos, Hands On and other ways to share knowledge and improve the integration among coworkers and departments in Sao Paulo and Rio de Janeiro.

International experience, working with teams from Brazil, Switzerland, Spain, Venezuela and Canada.

Developed full applications with Clojure, reducing the development time and bug occurrences.

Experience with front end development with JavaScript, Angular.js and React/Reagent and responsive design.

Software Engineer

October 2007 - March 2012 (4 years 6 months)

São Paulo / Rio de Janeiro

iMasters

Instructor - Ruby on Rails

October 2012 - September 2014 (2 years)

Wrote a complete Ruby on Rails training and presented it at CEUNES and some other places.

PFTech

Lead Developer

January 2002 - December 2007 (6 years)

Hi Solution

Lead Developer

December 2006 - October 2007 (11 months)

Development and maintenance of modules of an inhouse ERP.

Analysis and development of new products.

Requirements survey, analysis and development of CRM

Areco Sistemas Empresariais

Developer

February 2002 - December 2006 (4 years 11 months)

São Paulo Area, Brazil

Development and maintenance of modules of an ERP. Intranet development for customers, working with data of this ERP.

Development of company website.

Implementation and training in company.

Redsys Informatica Ltda

Software Developer

June 2003 - April 2004 (11 months)

Worked in a small team developing BI software for pharmaceutical companies.

Fundação de Empreendimentos Científicos e Tecnológicos -

FINATEC

IT Technician

September 1998 - February 2002 (3 years 6 months)

Education

FGV

Executive MBA, Project Management · (September 2021 - December 2022)

Harvard Online

Exercising Leadership: Foundational Principles, Business, Management, Marketing, and Related Support Services · (September 2021 - September 2021)

Centro Universitário Anhangüera

Bachelor's degree, System Analysis and Software Development · (2013 - 2015)

Centro Universitário Fundação Santo André

Bachelor's degree · (January 1998 - December 2002)
